Summary

I'm a DevOps Engineer with 5 years of experience working on production Linux systems, cloud infrastructure, and Kubernetes. Most of my work has involved keeping services running, improving deployment processes, and automating routine infrastructure tasks.

I've worked extensively with AWS, Terraform, Helm, Ansible, and CI/CD systems. I'm comfortable investigating production issues, working across different parts of the infrastructure, and improving the maintainability of existing systems.

Professional Experience

Mancala Gaming

Aug 2024 – Jun 2026 | iGaming

Software development startup specializing in online casinos and slot games.

DevOps Engineer

- Helped migrate production workloads to the new on-prem Kubernetes cluster, handling service endpoint cutovers and traffic shifting for backend microservices.
- Migrated OCI container images from Nexus to GitLab Container Registry.
- Wrote and maintained Helm charts for microservices, including complex templates and documentation.
- Worked on GitLab CI/CD pipelines for high-traffic backend services, troubleshooting deployment issues and keeping downtime low.
- Improved monitoring and logging with VictoriaMetrics, Loki, OpenTelemetry, and Grafana dashboards and alerts.
- Refactored pipelines and Helm charts to improve GitOps practices, add security tools, and switch from standalone Helm deployments to Werf.
- Created runbooks and incident recovery procedures, and wrote postmortems to make recurring problems easier to investigate and resolve.

…

…

Webtronics

Mar 2023 – Aug 2024 | Crypto | Outsourcing

Software development and IT infrastructure services provider. Its main project was TouchWallet, a mobile cryptocurrency wallet and exchange application.

DevOps Engineer

- Migrated TouchWallet's production backend infrastructure to AWS EKS from another cloud environment.
- Set up and maintained blockchain full nodes for Bitcoin, Ethereum, Solana, and TRON, using Ansible to automate configuration.
- Managed Kubernetes clusters and application workloads on AWS EKS.
- Wrote new GitLab CI/CD pipelines and maintained existing ones.
- Used Terraform to provision and manage backend infrastructure, including writing custom modules.
- Onboarded and mentored a junior Linux systems administrator.

…

PiratOS

Feb 2022 – Feb 2023 | Crypto

Developer of cryptocurrency mining software and a specialized Linux-based operating system, also providing paid technical support and enterprise solutions.

Tier 2 Linux Technical Support / Junior DevOps Engineer

- Looked after Kubernetes workloads for an on-premises Linux-based cryptocurrency mining platform, improving monitoring and alert accuracy with Prometheus and Grafana.
- Worked with Azure DevOps CI/CD pipelines and release automation.
- Investigated and resolved Linux, networking, and application problems in customer environments as part of Tier 2 technical support.

…

Direct Credit

Feb 2020 – Jan 2021

B2B financial technology provider offering infrastructure for loan origination, customer verification, and banking integrations.

Tier 2 Linux Technical Support

- Handled Linux, networking, workstation, and server issues, troubleshooting incidents and restoring normal operations.

Education

National Research University Moscow Power Engineering Institute (MPEI)
Coursework in Radio Engineering

Relevant coursework: Programming, Circuit Theory, Calculus, Classical Field Theory, Radio Technology

Technical Skills

Cloud: AWS (EKS, EC2, S3, RDS, MSK, EBS, IAM, VPC), Microsoft Azure, Yandex Cloud
Containers and Orchestration: Kubernetes (Ingress, RBAC, HPA, NetworkPolicy), Helm, Werf, Docker, Podman
Infrastructure as Code: Terraform, Ansible, Werf
CI/CD and Release Engineering: GitLab CI/CD, Azure DevOps
Observability: VictoriaMetrics, Prometheus, Grafana, AlertManager, Loki, OpenTelemetry
Programming and Scripting: Bash, Python, SQL, JavaScript (Node.js)
Systems: Linux (networking, system administration, troubleshooting), Ubuntu, CentOS, Arch Linux, NixOS
Tools: Git, Vim, JetBrains PyCharm, Visual Studio Code, Zed
AI: OpenAI GPT, Anthropic Claude, OpenAI Codex, Claude Code, skills, prompt engineering, agentic workflows, self-hosted AI models
Practices: GitOps, Infrastructure as Code (IaC), DevOps, platform engineering, site reliability engineering (SRE), runbooks, technical documentation

Languages

English: C1 (Advanced) – EF SET Certificate
Russian: Native
