Summary

DevOps Engineer with nearly 5 years of experience supporting production Linux systems, CI/CD automation, Kubernetes workloads, cloud infrastructure, Terraform, Helm, Ansible, and observability stacks. Experienced in cloud-native operations, release automation, infrastructure as code, GitOps workflows, production troubleshooting, and reliability-focused engineering.

Technical Skills & Keywords

Cloud: AWS (EKS, EC2, S3, RDS, IAM, VPC), Yandex Cloud

Containers and Orchestration: Kubernetes (Ingress, RBAC, HPA, NetworkPolicy), Helm, Werf, Docker

Infrastructure as Code: Terraform (modules, remote state, state management, infrastructure-as-code), Ansible

CI/CD and Release Engineering: GitLab CI, Azure DevOps

Observability: VictoriaMetrics, Prometheus, Grafana (alerting, dashboards), Loki

Programming and Scripting: Bash, Python, SQL, JavaScript (NodeJS), YAML

Systems: Linux (networking, troubleshooting), Ubuntu, CentOS, Arch Linux, NixOS

Practices: GitOps, Infrastructure as Code, DevOps, platform engineering, runbooks, documentation, cross-functional engineering support

Professional Experience

Aug 2024 – Jun 2026, **DevOps Engineer**

[Mancala Gaming](#) 🔗 (remote)

- Executed workload migration between Kubernetes clusters, coordinating namespace setup, service endpoint cutover, and traffic shifting for backend microservices.
- Migrated container image registry from Nexus to GitLab OCI, consolidating artifact storage within the existing CI/CD platform.
- Authored Helm charts for backend microservices, covering ingress, HPA, and RBAC configurations with templated values for multi-environment deployments.
- Maintained and troubleshoot GitLab CI/CD pipelines for high-traffic backend microservices.
- Improved production observability with VictoriaMetrics, Loki, and OpenTelemetry, surfaced through Grafana dashboards and alerts.
- Reduced operational risk by documenting runbooks and standardising incident recovery procedures.

...

Mar 2023 – Aug 2024, **DevOps Engineer**

[Webtronics](#) 🔗 (remote)

- Launched TouchWallet mobile crypto wallet backend infrastructure from scratch to production on AWS EKS.
- Deployed and maintained blockchain full nodes, ensuring chain synchronisation and data

availability.

- Managed development and staging Kubernetes environments on AWS EKS, maintaining configuration parity with production.
- Designed GitLab CI/CD pipelines, reducing release preparation time and improving deployment repeatability.
- Managed backend infrastructure with Terraform (including custom modules) and Infrastructure as Code practices.
- Onboarded and mentored a junior system administrator.

...

Feb 2022 – Feb 2023, **Tier-2 Linux Technical Support / Junior DevOps** [PiratOS](#)  (remote)

- Administered and monitored Kubernetes workloads for an on-prem Linux-based cryptocurrency mining rig platform, improving alert accuracy with Prometheus and Grafana.
- Implemented CI/CD release automation with Azure DevOps, Helm, and Ansible.
- Resolved Tier-2 Linux, networking, and product issues for on-prem client installations.

...

Feb 2020 – Jan 2021, **Tier-2 Linux Technical Support** [Direct Credit](#)  (Moscow, on-site)

- Resolved Linux, network, workstation, and server issues.

Education

National Research University Moscow Power Engineering Institute (MPEI)

Coursework in Radio Engineering

Relevant coursework: Programming, Circuit Theory, Calculus, Classical Field Theory, Radio Technology
